Integromics™ www.integromics.com

Integromics™ is a Spanish-based leading provider of software solutions for Genomics, Proteomics and Drug Discovery in two strategic areas: data management and integration as well as intelligent data analysis and data mining. Integromics™ Is committed to be a key player in the transition from Information to Knowledge in the post genomic era, developing new software tools enabling the efficient organization of vast and varied types of data, as well as their analysis and mining so that new knowledge emerges. The software solutions in microarray management and in RT-PCR and microarray data analysis is provided in strong partnership with leading global Life Sciences companies. From its scientific base, Integromics™ offers its clients a deep and current understanding of challenges, initiatives and solutions related to the great field of functional genomics.

Currently we are offering the following opportunity:

Software Engineer

You have a solid background in .NET and C++ programming technologies. You like to be involved in challenging projects where you have the chance to decide how to do things and the opportunity to meet and collaborate with seasoned programmers. You like team work and you feel confident working in international teams.

Requirements

- Computer Science Engineer or similar
- Knowledge and experience in .NET technology.
- Solid background in C# and C++ programming language.
- Background and experience in Software engineering: development process like RUP, eXtreme programming...
- Good Command of written and spoken English

Location: Granada Office, Spain
